Introduction

According to traditional Chinese medicine, the pericardial meridian is associated with the pain or fullness in the chest, palpitations, depression, restlessness, manic or depressive disorders, nausea or vomiting, hiccups, gastric pain, and distension in the upper abdomen (Bai and Baron, 2001). Since the parasympathetic modulation of both heart and gut is largely mediated by the vagus nerve, and since vagal stimulation of the gut can result in increased peristalsis while the vagal stimulation of the heart can result in decreased heart rate (Guyton and Hall, 1996), it is speculated that to some extent the pericardium meridian might be associated with the autonomic nervous modulation of the subject.

Acupuncture or acupressure at the Neiguan (P6) point, the most frequently used acupoint in the pericardium meridian, has been shown to lessen nausea and vomiting (Dundee *et al.*, 1987, 1988, 1989a and b; Ho *et al.*, 1989; De Aloysio and Penacchioni, 1992; Belluomini *et al.*, 1994; Fan *et al.*, 1997; Harmon *et al.*, 2000). Because nausea and vomiting are also related to autonomic nervous activity (Morrow *et al.*, 1992; Morrow *et al.*, 1999), we speculated that the autonomic nervous activity might be changed when acupuncture at the P6 point was performed.

Heart rate variability analysis is a useful non-invasive method for the assessment of autonomic nervous modulation of heart rate. Some diseases are associated with depressed vagal modulation, and the restoration of vagal modulation is associated with the improvement

Hubble telescope maps Voyager probes' cosmic road trip

Analysis reveals the gas clouds the far-flung spacecraft will encounter.

As they sail into interstellar space, NASA's twin Voyager probes are entering a mysteriously complex realm. The spacecraft aren't in completely uncharted territory though.

SUPPLEMENTARY INFORMATION

doi:10.1038/nature20584

Supplementary table 1 | Equations describing the ‘Likely water’ cluster hull and cluster overlaps in the multidimensional feature-space.

These equations describe the ‘Likely water’ cluster in the multidimensional feature-space. By definition, part of this cluster contain pixels that are not water, and request additional processing steps to be properly assigned. The method section provides details about the usages of this equations within the expert system classifier.

Pioneers in avian intelligence have found that although birds' brains are very small, they are incredibly intelligent, and some species have surprising similarities to the behavior or brain functions of humans. Examples range from the who was the first animal documented to dance to a beat to Irene Pepperberg's in-depth studies with the African grey parrot Alex (named for Avian Learning Experiment). (Laudato, 2010; Pepperberg, 1999) There have even been studies documenting that some birds successfully use, and even modify or build, tools. (Bird & Emery, 2009; Holzhaider et al., 2011; von Bayern, Heathcote, Rutz, & Kacelnik, 2009).

"Birdbrain" should be a compliment(DeLong, Bragg, & Simmons, 2008; EUROBATS Secretariat, 2004).

Pioneers in avian intelligence have found that although birds' brains are very small, they are incredibly intelligent, and sometimes have surprising similarities to the behavior or brain functions of humans. Examples range from the cockatoo who was the first animal documented to dance to a beat to Irene Pepperberg's in-depth studies done with the African grey parrot Alex (named for Avian Learning EXperiment). There have even been studies documenting that some birds successfully use, and even modify or build, tools.(Bird & Emery, 2009; Holzhaider et al., 2011; von Bayern, Heathcote, Rutz, & Kacelnik, 2009).
