摘要: The carbon nanotube composite material and its fabrication techniques are introduced to construct a chip-based electrode system for human breath dynamics characterization. The application of 10 V dc bias can generate electric field high enough to effectively collect the charged particles in the human breath. Without using breath collecting tubes, the field tests in the open air exhibit that the system is technologically promising for long-time and noncontact human breath dynamics monitoring, due to its high stability, sensitivity, and safety operation performance with power consumption in the order of 10^{-5} W. [ABSTRACT FROM AUTHOR]

(Received 22 October 2004; accepted 13 September 2005; published online 14 October 2005)

Temperature changes induced by externally applied mechanical stress were observed in the $\text{Pb}_3(\text{PO}_4)_2$ ferroelastic crystal. These characteristic features can be explained by the thermoelastic effect as in other thermoelastic martensitic materials. In this study, the mechanical stress dependence of the thermoelastic effect was studied using a modified thermomechanical analysis system. The thermoelastic effect strongly depended on the mechanical stress and was enhanced by ferroelastic domain switching, responsible for the pseudoelastic behavior of ferroelastic materials. The $\partial T / \partial \sigma_{\sin}$, the change of sample temperature with varying stress enhanced by pseudoelasticity, was $\sim 9.5 \times 10^{-2} \text{ }^\circ\text{C}/\text{MPa}$ at $159 \text{ }^\circ\text{C}$, ferroelastic temperature region under 1.2 MPa sinusoidal stress. This value is eight to nine times higher than the values obtained under bias stress. This result can be explained by a thermoelastic equation which includes the effective thermal expansion coefficient in the ferroelastic phase. © 2005 American Institute of Physics. [DOI: 10.1063/1.2106003]

The structural phase transitions—including the ferroelastic and martensitic transitions—can generate salient me- directly through the chucks, where positive (negative) σ_{bias} implies tensile (compressive) stress. The bias stress is a static

關於 PubMed

- (1) 隸屬：美國國家衛生研究院(NIH) > 國家醫學圖書館(NLM) > 生技資訊中心(NCBI) > Entrez 資訊檢索系統 > PubMed 醫學期刊文獻索引摘要(非全文)資料庫。
- (2) 收錄：涵蓋臨床與基礎醫學、護理、牙科學、獸醫、健康照護等主題。年代起自1946年，逾2千萬筆書目。現刊含5,500種，主要語言為英語，及其他38種語言。任何人皆可免費查詢書目，並提供LinkOut對外連結到各出版社之電子全文（可否下載取決於所在機構訂購或免費）。

PubMed組成包含 Medline等五個資料庫

1. **MEDLINE** 經Medical Subject Headings 索引程序之資料庫，為PubMed 主要組成部分(MESH Term)
2. **In Process** 正在進行加工索引之書目
3. **Publisher-Supplied** 通常是出版社提供電子先於紙本發行之未正式出版文獻的書目，大部份會進入In Process，接著變成MEDLINE 的一部份
4. **PubMed Not Medline** 僅佔少部份，為非MEDLINE 收錄準則的文獻書目
5. NCBI Online books NCBI 收錄之850+本電子書及其章節索引

PubMed 醫學期刊文獻資料庫

Medline採用MeSH作為主題分析的依據

- 醫學標題表（Medical Subject Headings，簡稱MeSH）是NLM針對生物醫學資料所整理出的標準詞彙控制表。
- 對同一概念採用固定的詞彙表達方式，以達到控制詞彙目的，方便生物醫學領域的學者或從業人員彼此間的溝通，更可用以陳述資料內容

範例：In a 56-year-old woman with type 2 diabetes mellitus, microproteinuria, elevated blood pressure, and dyslipidemia, does “tight” control of glucose reduce cardiovascular complications?

中文關鍵字	英文關鍵字與同義字	MeSH terms (控制詞彙)
第二型糖尿病	<u>type 2 diabetes mellitus</u>	<u>Diabetes Mellitus, Type 2</u>
血糖控制	glycemic control OR <u>HbA1c</u>	<u>Blood Glucose</u> OR <u>Hemoglobin A, Glycosylated</u>
心血管併發症	cardiovascular complications	<u>Cardiovascular Diseases/etiology</u>
嚴格	tight OR strict	(無適當 MeSH，故應盡可能列出同義字，可用*表字尾變化，例: tight* OR strict*)
56 歲女性	(不需直接輸入關鍵字 => 凡性別、年齡等條件，可使用 Limits 功能做篩選)	

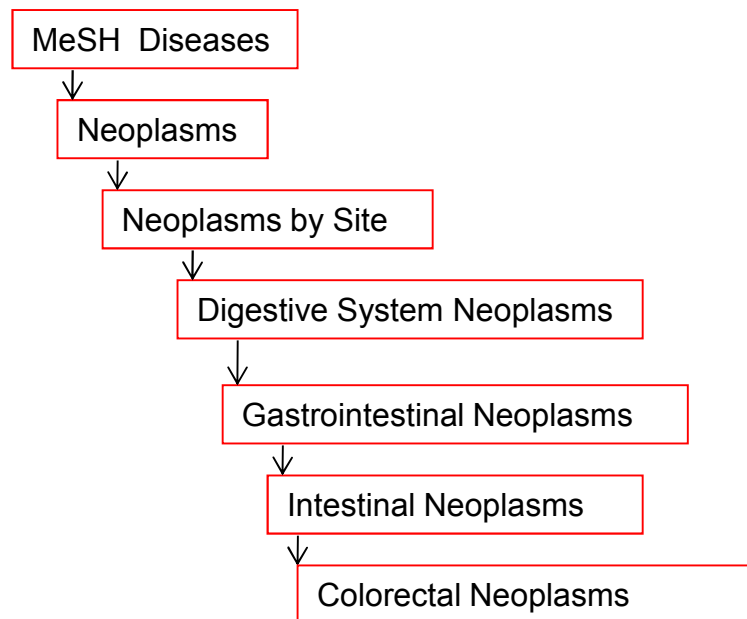

(表格內畫底線關鍵字表示為 MeSH 或可被轉譯成適當 MeSH)

PubMed 醫學期刊文獻資料庫

MeSH的樹狀結構標題表

- Mesh 分為16大類，每大類採樹狀結構（tree structure）。
- 依層級細分小標題，可顯示標題之間的類屬關係。
- 最上層顯示者，表示該標題詞所代表的主題意涵較廣（generic）。
- 而愈下層顯示者，則表示該標題詞所代表的主題意涵愈為專指（specific）。
- 如此上下標題層級的呈現方式，更可比擬為各標題詞間的廣義詞（broad terms）及狹義詞（narrow terms）關係。

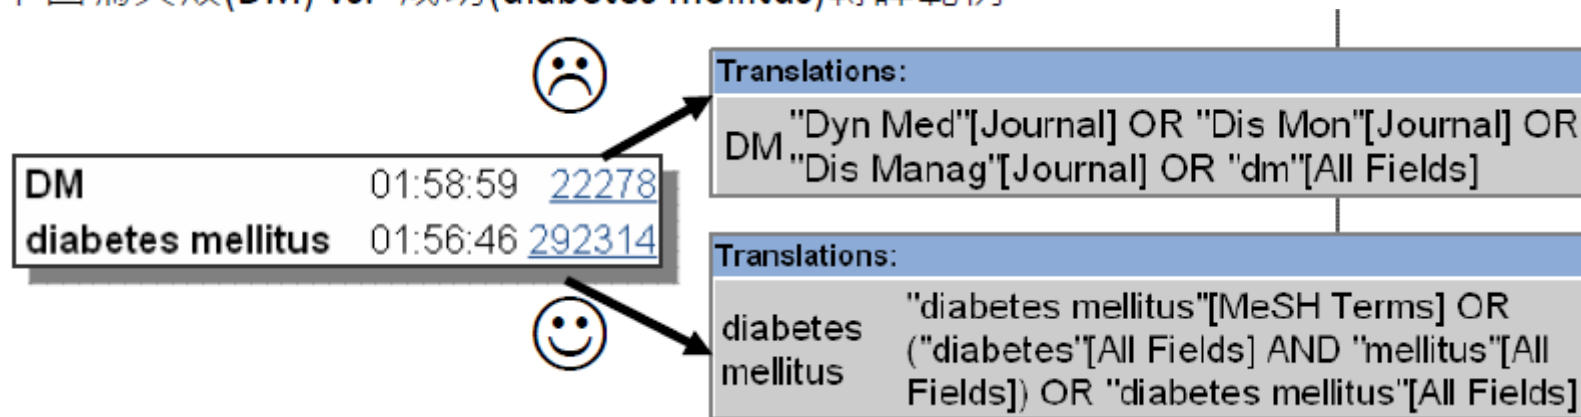

PubMed 醫學期刊文獻資料庫

使用MeSH標題比對查詢

- 可以協助找出精確符合主題的資料
- 無須煩惱因縮寫、別名而遺漏相關文獻
- 使用同義詞也可準確查詢出相關文獻資料
- 使用MeSH Tree
 - 可以依需求擴展或縮小查詢範圍
 - 了解各醫學標題的橫向與縱向關聯

下圖為失敗(DM) vs. 成功(diabetes mellitus)轉譯範例

1. Binding of tolbutamide to glycosylated human serum albumin.
(eng) By Joseph KS, Anguizola J, Hage DS, Journal Of Pharmaceutical And Biomedical Analysis [J Pharm Biomed Anal], ISSN: 1873-264X, 2011 Jan 25; Vol. 54 (2), pp. 426-32; PMID: 20880646; The presence of elevated levels of glucose in blood during *diabetes* can lead to the non-enzymatic glycation of serum proteins such as human serum albumin (HSA). This study examined the changes that occur in binding of the sulfonylurea drug tolbutamide to HSA as the level of glycation for this protein was increased. High-performance affinity chromatography was used in this work along with columns containing various preparations of in vitro glycosylated HSA. It was found in frontal analysis experiments that the binding of tolbutamide with all of the tested preparations of glycosylated HSA could be described by a two-site model involving both strong and weak affinity interactions. The association equilibrium constants ($K(a)$) for tolbutamide at its high affinity sites on glycosylated HSA were in the range of $0.8-1.2 \times 10^5 \text{ M}^{-1}$ and increased by 1.4-fold in going from normal HSA to mildly glycosylated HSA. It was found through competition studies that tolbutamide was binding at both Sudlow sites I and II on the glycosylated HSA, in agreement with previous studies. The $K(a)$ for tolbutamide at Sudlow site II increased by 1.1- to 1.4-fold in going from normal HSA to glycosylated HSA. At Sudlow site I, the $K(a)$ for tolbutamide increased by 1.2- to 1.3-fold in going from normal HSA to the glycosylated HSA samples. This information demonstrates the effects that glycation can have on drug interactions on HSA and should provide a better quantitative understanding of how the protein binding of tolbutamide in serum may be affected for individuals with *diabetes*. 節： GENERAL ARTICLE

BACKGROUND: Diabulimia, the omission or reduction of insulin use by persons with type 1 *diabetes*, is a harmful method of weight control. The purpose of this article is to present school health personnel with the information they may need to become more aware of the possibility of diabulimia in their students — especially females — with type 1 *diabetes*.

METHODS: A review of the somewhat limited medical and *diabetes*-related organizations' literature on diabulimia was conducted to establish the role that school health personnel could play in raising awareness of students with this condition as well as education for diabulimia prevention.

RESULTS: Since insulin encourages fat storage, many with type 1 *diabetes* have discovered the relationship between reducing the amount of insulin they take and corresponding weight loss. Improper regulation of needed insulin treatments poses serious health problems that may require immediate medical attention.

CONCLUSION: School personnel, especially those in the Coordinated School Health Program areas of comprehensive school health education, school health services, and guidance and counseling services have key roles to play in the prevention and recognition of diabulimia in students with *diabetes*.

資源使用檢索方向

- **Primary DB** 期刊文獻(原始文獻)資料庫
- **Secondary DB** 評論性資料庫(文獻)

期刊文獻(原始文獻)資料庫使用流程

1. 文獻查找

■ 期刊（出版品）導向

- 知道
- 不確定

■ 關鍵字導向

- 知道
- 不確定 (MeSH, CINAHL Headings)

MeSH 主題
查找瀏覽

精準的關鍵字
搜尋

2. 文獻儲存、寄送

- 單筆
- 多筆

3. 文獻參考格式引用與匯出至書目管理軟體

- 單筆文獻之參考文獻格式
- 多筆文獻之參考文獻格式

4. 文獻之自動通知（線上宅配）(Alert, 警示, 通報)

- 來自某期刊(出版品)之最新文獻
- 來自某主題或檢索條件之最新文獻

文獻標題

文獻摘要

文獻主題

文獻全文

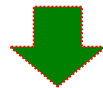

評論性資料庫(文獻)查找方式

若能以精確的關鍵字或主題找到相對應的主題
(這當然最好.....)

如果上述方式找不到.....

建議先以「主題、大方向」的標題或分類
進行「查找」或「瀏覽」

再到「最接近」或「最相關」主題內
進行全文查找

善用快捷鍵「Ctrl+F」進行整頁關鍵字搜尋
(適用PDF檔案或HTML檔案)
