For type 2 diabetes poorly controlled by metformin monotherapy, the addition of any non-insulin antidiabetic drug reduces HbA1c to a similar extent, but with differing effects on weight and hypoglycaemic risk

Commentary on: Phung OJ, Scholle JM, Talwar M, *et al.* Effect of noninsulin antidiabetic drugs added to metformin therapy on glycemic control, weight gain, and hypoglycemia in type 2 diabetes. *JAMA* 2010;303:1410–18.

Context

Current guidelines recommend metformin as initial therapy in patients with type 2 diabetes.¹ With time, as β cell function declines, most patients require additional therapy.² While there is now an expanding list of drugs available to be used as second-line agents, studies that directly compare the efficacy of these agents are lacking.¹ The choice of a second-line agent is, therefore, less clear. In this meta-analysis, Phung and colleagues address this important issue and evaluate the efficacy of currently available non-insulin diabetes therapies.

Methods

The investigators used a combination of traditional and mixed-treatment comparison meta-analysis approach to evaluate the glycaemic and non-glycaemic effects of the different classes of drugs. Studies were identified using a systematic literature search of MEDLINE and Cochrane databases from 1950 to January 2010. Only parallel-design randomised controlled trials (RCT) that evaluated

observed between the different classes. Favourable effects on weight were observed with glucagon-like peptide-1 (GLP-1) analogues (WMD -1.74 kg; 95% CI -3.11 to -0.48 kg), dipeptidyl peptidase-4 (DPP4) inhibitors (-0.14 kg; 95% CI -0.94 to 0.63 kg) and α -glucosidase inhibitors (AGI) (-1.80 kg; 95% CI -3.79 to 0.21 kg). In contrast, weight gain was more noticeable with sulfonylureas (2.06 kg; 95% CI 1.15 to 2.96 kg), glinides (1.77 kg; 95% CI 0.46 to 3.28 kg) and thiazolidinediones (2.08 kg; 95% CI 0.98 to 3.17 kg). There was a significantly greater risk of hypoglycaemia associated with sulfonylureas (RR 4.57 ; 95% CI 2.11 to 11.45) and glinides (RR 7.50 ; 95% CI 2.12 to 41.52) treatment.

Commentary

The treatment algorithm suggested by the joint ADA/EASD guidelines has drawn much criticism for not giving much consideration to some of the newer therapies used in diabetes management.³ Several new therapies have been available for treatment of type 2 diabetes in recent years, and experience with some of these agents

TABLES

- House Brackmann Scale

The prognosis of Bell's palsy is related to the severity of the lesion [1]. A simple rule is that clinically incomplete lesions tend to recover. The House-Brackmann grading system was devised both as a clinical indicator of severity and also an objective record of progress (table 1) [2,3]. On this scale, grades I and II have good outcomes, grades III and IV characterize moderate dysfunction, and grades V and VI portend a poor result. Other grading systems are similar and sometimes favored [4].

Statistically, the natural history without treatment was described in a study of 1011 patients in 1982 [5]. One-third had an incomplete paralysis, and two-thirds had complete paralysis. Overall, 85 percent showed signs of recovery within three weeks, 71 percent had complete recovery, 13 percent had slight sequelae, and 16 percent had residual weakness, synkinesis and/or contracture. Patients with incomplete lesions had a 94 percent rate of return to normal function, while only 60 percent of those with clinically complete lesions returned to normal function. Herpes zoster is associated with more severe paresis and a worse prognosis compared with "idiopathic" Bell's palsy [6].

The prognosis is favorable if some recovery is seen within the first 21 days of onset [7]. A diagnosis of Bell's palsy is doubtful if some facial function - however small - has not returned within three to four months. (See "Bell's palsy: Pathogenesis, clinical features, and diagnosis", section on 'Diagnosis'.)

an environment where private agents have imperfect knowledge of the economy and therefore continuously reestimate the forecasting model that they use to form expectations. I find that imperfect knowledge on the part of the public, especially regarding monetary policy, can undermine the effectiveness of price-level targeting strategies that would work well if the public had complete knowledge. For low inflation targets, the zero lower bound can cause a dramatic deterioration in

標題: Effective Methods for Hedging Downside Risk during a Global Financial Crisis: Evidence from Asian Stock Index Futures.

Authors: Chih-Yung Lin, Po-Hsin Ho, Chang-Kuo Hu

資料來源: International Research Journal of Finance & Economics

日期: 2010

出版品類型: Academic Journal

摘要: This study investigates futures contracts for five Asian stock indices, namely the Nikkei 225, KOSPI 200, MSCI Hong Kong, MSCI Taiwan, and MSCI Singapore indices, using the GARCH, FIGARCH, HYGARCH, and GJR-GARCH models with normal and skewed Student-t innovation distributions. Empirical results indicate that volatility of Asian stock index futures is characterized by long memory. Additionally, owing to the significant parameter estimation of the fat-tail term and the better results obtained via VaR computations based on the Kupiec LR tests, this investigation also confirms that variations in Asian stock index futures exhibit fat tails. Third, empirical results indicate that the HYGARCH model displays...

資料夾內有文章

The Global Financial Crisis...

前往：資料夾檢視

匯出至「參考書目管理軟體」(EndNote、ProCite、Reference Manager、RefWorks、BibTeX 等等)

亦可直接匯入至
書目管理軟體

期刊文獻(原始文獻)資料庫使用流程

1. 文獻查找

- 期刊（出版品）導向
 - 知道
 - 不確定
- 關鍵詞導向
 - 知道
 - 不確定 (MeSH, CINAHL Heading)

MeSH 主題
查找流覽

精准的關鍵字
搜尋

2. 文獻儲存、寄送

- 單筆
- 多筆

3. 文獻參考格式引用與匯出至書目管理軟體

- 單筆文獻之參考文獻格式
- 多筆文獻之參考文獻格式

4. 文獻之自動通知（線上宅配）(Alert, 警示, 新知通報)

- 來自某期刊 (出版品) 之最新文獻
- 來自某主題或檢索條件之最新文獻

文獻標題

文獻摘要

文獻主題

文獻全文

評論性資料庫(文獻)查找方式

若能以精確的關鍵字或主題找到相對應的主題
(這當然最好.....)

如果上述方式找不到.....

建議先以「主題、大方向」的標題或分類
進行「查找」或「流覽」

再到「最接近」或「最相關」主題內
進行全文查找

善用快速鍵「Ctrl+F」進行整頁關鍵字搜尋
(適用PDF檔案或HTML檔案)

關鍵字搜尋之四種檢索模式

- 布林邏輯/片語：**Boolean/Phrase**
 - 以**and, or, not**限定檢索策略之邏輯，**and, or, not**無大小寫之分，置於**and, or, not** 之間字詞系統自動視為「片語」。Ex. 使用 [**"heart attack"** and treatment] 檢索結果與 [heart attack and treatment] 相同
- 尋找我的所有專案：**Search all my terms**
 - 與 **Google**檢索方式相同（布林邏輯中自動加上**and**），片語需要加上雙引號來區分。Ex. 使用 [**"heart attack"** and treatment] 檢索結果少於 [heart attack and treatment]
- 尋找我的任何專案：**Search any of my terms**
 - 只要任何一個關鍵字相符，即顯示於檢索結果中
- **SmartText**檢索：
 - 以自然語言檢索相關結果，最多輸入**5,000**個單字，可「以文找文」。檢索結果較其他模式多，檢索結果預設以[相關性]排列

進階檢索：關鍵字之比對欄位表

- **TX All Text**：搜尋內文全文中與key word相符之文獻
- **AB Abstract**：僅搜尋摘要部分與key word相符之文獻
- **AF Author Affiliation**：查詢作者關係機構。
Ex. Harvard University
- **AG Age Group**：限定年齡層。Ex. Age over 80
- **AN Accession Number**：可指定文獻之AN號碼
- **AU Author**：以作者姓名作為搜尋關鍵字。
- **CA Corporate Author**：搜尋機構以自身機構名稱發表的文獻。Ex. National Hospital
- **CH Cochrane AN**：以Cochrane Accession Number查找文獻
- **CT Gender**：以性別限定文章。
- **DN Dissertation Number**：以Dissertation Number查找文獻
- **DT Publication Date**：以出版日期查找
- **EM Entry Date**：以登入資料庫的日期查找
- **IB ISBN**：以書籍的ISBN查找。
- **IS ISSN**：以期刊的ISSN查找。
- **JT Journal Title Abbreviation**：以期刊名稱縮寫查找
- **LA Language**：以文獻所使用之語言來限定查找
- **MW Word in subject heading**：查找key word與subject heading部分相符之文獻
- **MH Exact subject heading**：查找key word與subject heading 完全相符之文獻
- **MJ Word in Major subject heading**：查找與Major subject heading相符之文獻
- **MM Exact Major subject heading**：查找與Major subject heading完全相符之文獻
- **PB Publisher**：以出版者限定查找
- **PG Numbers of Pages**：以頁數限定查找
- **PM Medline PMID**：以Medline的PubMed ID來查找
- **PY Year of Publication**：以出版的年份限定查找
- **SO Journal Title**：以期刊的完整名稱查找
- **TC Table of Content**：查找目錄中相符的文獻
- **TI Title**：以文獻的篇名作為查找依據
- **VI Volume**：以出版品的卷期作為查找依據
- **Cas registry number**：化學物質登記號
- **Gene symbol**：基因符號
- **Gene symbol word**：基因符號字彙
- **Grant number**：獎助代碼
- **Molecular sequence**：分子序號
- **Registry number word**：登記號碼中有關鍵字
